

Salivet

*A concentrated extract of
natural salicylates*

Salivet is a combination of natural salicylates isolated from spiraea chamaedryfolia and willow bark. Natural salicylates act antiinflammatory, analgetic and depress the aggregation of thrombocytes. Further they also dilute the blood showing preventive activity against malfunctions of the circulatory system. Natural salicylates incorporated in the formula of Salivet are the best solution for the problems occurring in course of young birds farming and the final phase of their fattening.

Composition: mixture of flavouring compounds, sodium chloride, potassium chloride

Indications: Salivet is intended for each production type or group of poultry:

- it supports treatment of motor skills disorders resulting from the joints inflammatory condition
- in case of poor general condition, particularly in case of the young birds and final phase of their fattening
- for the treatment of blood vessels fragility
- for the treatment of cardiovascular system disorders resulting from the quick growth tempo
